

Dear Parent,

We are committed to caring for your child throughout their teenage years. Will we continue to care for your child through age twenty-one.

Adolescence can be an exciting, yet challenging time for our children. Our goal is to help you and your teen navigate this period of life so your child makes healthy and safe choices. We will be addressing not only medical issues during the adolescent well checks, but also exploring emotional and life style issues. To aid us in addressing the many issues that face teens today, we will be giving your child a Confidential Adolescent Survey to complete during their check up, starting at age thirteen. Your child will complete this questionnaire during their exam and we will review it with your child at the time of the visit.

Certain aspects of your teenager's medical care must remain confidential by law. Please read the attached Confidentiality Statement.

You will have an opportunity to address any issues concerning your child after the exam. If you feel there are issues we need to be aware of prior to seeing your child, please let the nurse know.

We look forward to caring for your child through the adolescent years. Our goal is to promote health and safety and help your child gain the confidence, independence and knowledge needed to manage their own health needs.

Sincerely yours,

Dr. Ehlenfield
Dr. Raiken
Dr. Conley
Mary Sheppard, PNP
Anna Couell, FNP
